

# The Correlation Technology Platform: Invention and Innovation

Innovation:	Relaxed Discovery
Invention:	Exhaustive, Intrinsic Relations-Based Extraction and Transformation
Invention:	Normalization of Heterogeneous Data into Knowledge Fragments
Innovation:	Products of Extraction (Knowledge Fragments) Equally Eligible for Recombination Without Subjective Constraint
Invention:	Correlation, Through Establishment of Connection from “Origin” Term, Phrase, Concept or Entity to “Destination” Term, Phrase, Concept or Entity, Yields an Inductive Relation that Can Not be Achieved Through Any Other Method

# The Correlation Technology Platform: Invention and Innovation

- Innovation: Configurable Fuzzy Association
- Invention: Every Correlation Driven to Exhaustion - Against Any Countable Corpus, Exhaustion Delivers a Certain Answer Space
- Invention: Applied Analytic Techniques Can be Set Against a Certain Fulcrum to Analyze the Results.
- Innovation: Applied Analytics - Logical, Statistical, Rule Based, or Any Type Appropriate for the Domain of the Problem Are Now Available for Use
- Invention: Exhaustive Results Achieved by Exploiting Heuristics Unavailable to Any Other Method - Using Less Hardware Than Any other means
